

Construction projects:

Think ahead...

to your finished landscape, before your crews break ground. Most of the time, quality plants can be found on the undeveloped property that you are about to bulldoze. Take the time to investigate what you can salvage out of the property. The advantages are not only saving costs on new plant material but the large quality plants salvaged, would be hard to find at any price. Also the plant materials found on the lot are acclimated to your particular environment, such as soil conditions, wind severity & ground water availability.

Landscape projects:

Think impressive...

and what could be more impressive in a finished landscape than the presence of larger trees to offset your smaller plantings. With our 90" spade you can afford the look of grandeur, which comes with trees that appear to have been growing in that spot for 40 years.

Landscape renovation:

Think economical...

it is our goal to keep our customers happy and costs down. What better way to accomplish this than by separating overcrowded plant material and moving it to a more sensible location, such as screening the next door neighbor's property, or just moving it so the plant has room to grow and will perform better.

Our 70" & 44" machines are very maneuverable and can sneak in between plants that have become competitive with each other.

Air Spading:

Pneumatic Excavation of heavily compacted soil to aid in the digging.

Air-spade root excavation shows the girdling root very clearly.

Bare Root Transplanting:

Bare root transplant where hand or mechanical digging would be prohibitive.

Bare root transplant of large trees.

If it is too big for our hydraulic spades....

our digging crews can handle it. Our digging crews have many successes moving large trees up to 200" diameter balls. We take great care in pre-moving issues, such as pre-feeding, root pruning and in timing the move to match the trees needs. We try our best to get the job done as fast as possible to avoid extended root exposure to arid conditions. We will help you to examine the new location and determine compatibility with the tree to enhance overall health and turn around time. We can add drainage or irrigation, change soil conditions and provide after care if necessary.

Trees on The Move

- All aspects of tree care
- 40+ years of experience
- Fully Insured and Licensed
- Certified Arborists on staff
- Prompt & reliable
- Transplanting large and small trees and shrubs
- Tree supports, using anchors, cedar stakes or dead men
- Feeding & soil amendments
- Drainage and irrigation
- Land clearing and grading
- 120' crane service
- Plant Health Care/Tree Spraying
- Tree Nursery
